# Pressurising Tank Top

The B&G Pressurising Tank Top (PTT) is a game-changer for professionals using B&G Primeline stainless steel sprayers. Designed to replace the traditional pump mechanism, the PTT eliminates the need to stop and manually pump during service calls, enhancing efficiency and reducing labour.

With the B&G Pressurising Tank Top, your sprayer maintains optimal pressure from start to finish. The PTT automatically repressurises the tank to 30 PSI whenever it detects a drop to 23 PSI, ensuring a consistent flow and uniform spray pattern. This means the ideal pressure is maintained from when the tank is full to empty.

## Key Benefits of B&G Pressurising Tank Top

Code: **BC22046000**

### Seamless integration with B&G Tanks

- Easily attaches to B&G Primeline tanks, replacing the manual pump mechanism for a smoother operation.

### Consistent Flow & Uniform Spray

- Delivers a consistent flow rate and uniform spray pattern, enhancing application precision.

### Automatic Pressure Maintenance

- Repressurises the tank to 30 PSI when pressure drops, ensuring continuous performance.

### Time-Saving Efficiency

- Save 5 minutes per 3.78L, reducing downtime and operator fatigue. Initial pressurisation takes just 2.5 minutes.

### Long-Lasting Rechargeable Battery

- Power through up to 100 liters per charge, keeping you productive throughout the day.
