

Build with HomeGuard for total termite security from day one...

HomeGuard Precision Termite Management system is a physical and chemical barrier that keeps subterranean termites out...

Effective	Scientifically proven to block, repel and kill subterranean termites
Proven	Is registered by the Australian Pesticides and Veterinary Medicines Authority (APVMA), having passed stringent testing of its effectiveness and safety
Convenient	Easy to install during construction – keeping you on time and on budget
Flexible Options	A “One-Stop” solution that can be adapted to suit a wide range of structural situations, with both subterranean termite barrier, moisture barrier and damp proofing
Enduring	Designed to last for the life of your home (50 years)
Safe & Eco Friendly	Non-scheduled, non-hazardous, non-toxic, non-invasive – safe for on-site workers, your family and pets

Backed by the FMC HomeGuard 25 Year, Million Dollar Manufacturer’s Warranty.*

**Conditional on undertaking an annual inspection of the property as detailed in the Australian Standard AS 3660.2, to be conducted by a HomeGuard Accredited Operator at the home owner’s expense. Other conditions apply.*

For total termite security put HomeGuard Precision Termite Management system to work in your home...

How is HomeGuard installed?

- HomeGuard is installed during your home's construction and sealed permanently to the foundations of the building. e.g. under/in slab and in the perimeter wall cavity.

What makes HomeGuard a cost effective choice?

- Because it is a single-installation product, the installation of HomeGuard fits seamlessly within the construction process;
- Our construction partners save time (and their clients' money) as a result;
- In many cases, HomeGuard sheeting serves a dual purpose both as an subterranean termite barrier and is a BCA compliant moisture barrier, thereby reducing costs.

FMC HomeGuard One million dollar 25 year warranty

The FMC HomeGuard warranty is a no-nonsense, simple warranty covering all structural and decorative timbers that are protected by a HomeGuard termite management system. The HomeGuard termite management system must be installed by a FMC HomeGuard Accredited Operator. The 25 year, \$1,000,000 warranty is conditional on an annual inspection of the property at the home owners expense. Other conditions apply; (Refer to warranty document for full terms and conditions).

What is HomeGuard?

HomeGuard is a physical and chemical termite management system. It is a single layer extruded polymer sheet product that is homogeneously impregnated with Biflex (Bifenthrin) termiticide.

The HomeGuard range is suitable for a wide range of building designs and includes:

Various purpose-designed polymer products;

- Underlay of slab and retaining walls (TMB)
- Perimeter wall cavity sheets (PB)
- Damp proof course and perimeter wall cavity sheets (DPC)
- A granular barrier (GT) for termite proofing voids
- Collars for use in slab to protect service penetrations.

How does HomeGuard work?

HomeGuard prevents concealed entry of subterranean termites; it works quickly to REPEL, KILL & BLOCK foraging subterranean termites and provides an ongoing protective barrier that surrounds your home.

How long will HomeGuard last?

The HomeGuard range of products are made from high quality, UV stabilized polymers, designed to handle the rigours of construction and provides effective subterranean termite management system for the life of your home.
