

POSSUM RELEASE DOOR

This possum release door is designed to allow possums to safely exit any tiled pitched roof. This release door can also be adapted to allow possums to exit tin roofs both pitched and flat.

For best results, repair all possum entry points whilst possums are in the roof space, install possum release door, leave door in until satisfied that all possums have exited the roof space and remove possum release door.

Installation Guidelines

Tiled Roof

After possum entry points have been repaired, simply remove a roof tile, as close to the entry point as possible, and replace it with the possum release door. Once all possums have exited the roof space remove the possum release door and replace with roof tile.

Tin Roof

The possum release door can be adapted to use in a tin roof by installing a dektite during the possum entry point repairs. This dektite will require a short length of PVC pipe fitted with an end cap to make the roof watertight after the possum release door has been removed.

Product Features

- ✓ Galvanised sheet base plate (400mm x 400mm)
- ✓ Hinged auto closing lid
- ✓ Galvanised latch surrounds claw proof lid (cannot be opened from the outside)
- ✓ PVC exit tunnel
- ✓ Fully waterproof
- ✓ Grab block for climbing
- ✓ Fits and roof to release possums
- ✓ Perspex clear lid (160mm x 160mm)
