

K6 ULTRA DENSE BIRD SPIKES

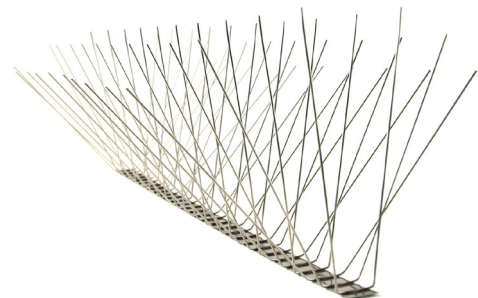

VEXO K6 Ultra Dense spikes are the industry leading solution for managing smaller avian species.

Engineered with precision, these spikes feature a lightweight design coupled with an increased density of spikes per unit, outperforming traditional bird spikes.

Specifically crafted for smaller birds, this innovation provides enhanced deterrence without compromising aesthetic appeal. The increased spike density ensures comprehensive coverage, making it significantly more challenging for smaller birds to perch. Crafted from durable yet lightweight stainless steel, these spikes blend seamlessly into most building surfaces.

INCREASED DENSITY

VEXO Ultra Dense bird spikes feature 50% more spikes compared to our flagship SS41 wide spike.

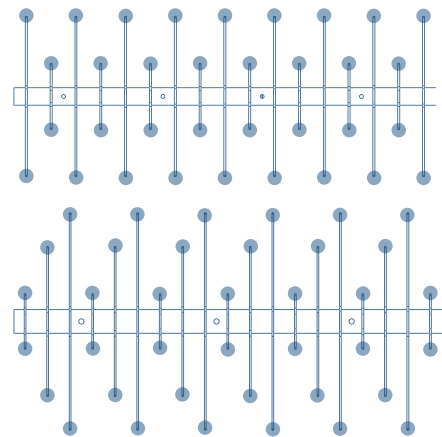

This increase in density reduces the space between spikes to further restrict access by smaller pest birds like mynas and sparrows.

Ultra Dense represents the pinnacle of bird deterrents. Lighter in weight, and easier to cut and customize to length.
