

IMIFORCE 200 SC TERMITICIDE

Key Product Features

- IMIFORCE is a new generation (non-repellent) insecticide with lethal action on Termites
- IMIFORCE has contact and systemic action and impairs the physiological activity of Termites. Termites stop feeding and die within a few days
- IMIFORCE has no vapour or irritation as it is a water-based SC
- The active ingredient in IMIFORCE is used in tick & flea petcare products and is the most widely used pesticide worldwide for crop protection
- Applied by trained Professional Pest Managers
- Developed and supported by a Research & Development company
- Manufactured to ISO9001(QUALITY) & ISO14001(ENVIRONMENT) & GMP standards

WITH COMPLIMENTS:

Termite Prevention Tips

- At least yearly Termite inspections should be carried out by a licensed Pest Management Professional or more frequently for high risk areas.
- Keep stored firewood or other wood well away from the structure and elevated.
- Remove any vegetation, mulch or soil that covers the foundation wall or contacts any wood surface (siding, trim, basement window frames, etc.)
- Ensure any wood that is in contact with the soil has been treated with a wood preservative.
- Make sure water drains are away from the foundation to ensure water does not accumulate or wash away treated soil.
- Immediately repair any leaking roofs, flashings, pipes or plumbing fixtures.
- Search for and eliminate sources of persistent moisture or dampness within or near buildings.

EXTERMINATE TERMITES

...Protection, against Termites
